
A portfolio of the complete series of Pexto Shop-ways will be sent to interested readers for the asking.

PEXTO SHOP-WAYS No. 12

Every Machine Right at Hand

Another Pexto innovation! This time it's a handy revolving standard that swings every machine into the right position at a moment's notice. A time saver, a labor saver and a space saver all in one. A sturdy standard that keeps your machines off the floor and out of the way when not in use, but keeps them right at hand when they're wanted.

Holdall Revolving Machine Standard

The illustration opposite tells an interesting and practical story. The revolving turret is shown carrying four machines on strong adjustable machine holders. It swings quickly to any position and easily locks with a handy lever. Can you imagine an easier way of handling successive sheet metal operations?

Then look at the six additional machine holders and you'll appreciate how this handy Pexto Standard saves valuable bench space and yet keeps your equipment within easy reach.

One man or four can work around this new standard. It's another high speed Pexto Helper that will increase your shop output.

We've just completed a new book which illustrates and describes this practical device in every detail. A copy will be on the way the moment we hear from you.
